## **DETAILED ACTION**

## Election/Restrictions

Restriction to one of the following inventions is required under 35 U.S.C. 121:

- I. Claims 1-31, drawn to methods, classified in class 438, subclass 636.
- II. Claims 32-54, drawn to products, classified in class 257, subclass 767.

The inventions are distinct, each from the other because of the following reasons:

Inventions I and II are related as process of making and product made. The inventions are distinct if either or both of the following can be shown: (1) that the process as claimed can be used to make other and materially different product or (2) that the product as claimed can be made by another and materially different process (MPEP § 806.05(f)). In the instant case, the product as claimed can be made by another and materially different process. For example, the via in a dielectric could be formed using methods other than coating and patterning a photoresist onto the dielectric, such as depositing a photoresist column in the position that the via is to be located, depositing the dielectric and then remove the photoresist leaving behind the via.

Because these inventions are distinct for the reasons given above and have acquired a separate status in the art as shown by their different classification, restriction for examination purposes as indicated is proper.

This application contains claims directed to the following patentably distinct species of the claimed invention:

Application/Control Number: 10/692,028

Art Unit: 2829

I) within the method claims 1-31 are two main groups:

A) one that stops etching at the ARC;

Within this group A are a subset of species to be elected:

- 1) the via bottom formed to look like:
  - a) a continuous curve; or
  - b) a flat bottom portion and a curved bottom portion;

Page 3

or

- B) one that etches the ARC.
- II) within the product claims 32-54 are two main groups:
  - A) a via bottom having a curvature;

Within this group A are a subset of species to be elected:

- 1) the via bottom formed to look like:
  - a) a lower portion of a circle; or
  - b) a flat bottom portion and a curved bottom corner;

or

B) a flat via bottom.

To clarify, a proper response to this restriction requirement should include:

- 1) An election between methods claims 1-31 and product claims 32-54.
- 2) If the method claims are elected, a further election must be made between IA or IB above.
- 3) If IA is elected, a further election must be made between 1a or 1b. If IB is elected, no further election is required.

Art Unit: 2829

4) If the product claims are elected, a further election must be made between IIA or IIB above.

5) If IIA is elected, a further election must be made between 1a or 1b. If IIB is elected, no further election is required.

Applicant is required under 35 U.S.C. 121 to elect a single disclosed species for prosecution on the merits to which the claims shall be restricted if no generic claim is finally held to be allowable. Currently, no claims are generic.

Applicant is advised that a reply to this requirement must include an identification of the species that is elected consonant with this requirement, and a listing of all claims readable thereon, including any claims subsequently added. An argument that a claim is allowable or that all claims are generic is considered nonresponsive unless accompanied by an election.

Upon the allowance of a generic claim, applicant will be entitled to consideration of claims to additional species which are written in dependent form or otherwise include all the limitations of an allowed generic claim as provided by 37 CFR 1.141. If claims are added after the election, applicant must indicate which are readable upon the elected species. MPEP § 809.02(a).

Should applicant traverse on the ground that the species are not patentably distinct, applicant should submit evidence or identify such evidence now of record showing the species to be obvious variants or clearly admit on the record that this is the case. In either instance, if the examiner finds one of the inventions unpatentable over

the prior art, the evidence or admission may be used in a rejection under 35 U.S.C. 103(a) of the other invention.

Applicant is advised that the reply to this requirement to be complete must include an election of the invention to be examined even though the requirement be traversed (37 CFR 1.143).

Applicant is reminded that upon the cancellation of claims to a non-elected invention, the inventorship must be amended in compliance with 37 CFR 1.48(b) if one or more of the currently named inventors is no longer an inventor of at least one claim remaining in the application. Any amendment of inventorship must be accompanied by a request under 37 CFR 1.48(b) and by the fee required under 37 CFR 1.17(i).

Any inquiry concerning this communication or earlier communications from the examiner should be directed to David A. Zarneke whose telephone number is (571)-272-1937. The examiner can normally be reached on M-F 7:30 AM-6 PM.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, William Baumeister can be reached on (571)-272-1712. The fax phone number for the organization where this application or proceeding is assigned is 703-872-9306.
